

**Product Highlights & Considerations**

**PVC Verticals** are durable and easy to care for and the vinyl louvers provide complete privacy when closed. PVC comes in sculpted styles, bold colors, and textures. We offer 2 styles of PVC – traditional crown and S-curve; both are flame resistant and water resistant.

**Fabric Verticals** add a touch of softness to a functional window treatment. Light filtering patterns will softly diffuse incoming light, while room darkening patterns will block out most light. Most fabrics (except Macrame and Palace) can be inserted into a vinyl groover for even greater light control and this has the added benefit of providing a neutral streetside appearance.

**Color Matching**

We recommend ordering all blinds at the same time to ensure the best dye lot match.

**Louvers / Vanes Only**

Vertical Blinds consist of vanes that attach to moving carriers inside of the vertical headrail. The blind height is based on the overall measurement from the top of the headrail to the bottom of the louver. Louvers will measure less than the blind ordered height.

- Vane length for an inside mount blind will measure 2 1/4” less than ordered height on VX200 headrail and 2” less than ordered height on Vistec headrail.
- Vane length for an outside mount blind will measure 1 3/4” less than ordered height on VX200 headrail and 1 1/2” less than ordered height on Vistec headrail.
- Vanes only must be ordered using the exact slat length. It is best to measure an existing vane or you can determine the vane size by subtracting the allowances stated above from an overall blind height measurement.

**S-Curve Vanes**

S-Curve vanes are NOT reversible. Right or Split Draw, the high (convex) side of the vane is to the right of the vane stem hole. Left Draw only, the high (convex) side is to the left of the vane stem hole.

S-Curve verticals use matching standard crowned slat for valance insert.

**Product Specifications & Limitations**

**Standard Blinds**

Minimum width:	6”
Minimum height:	12”
Maximum width:	240”
Maximum height:	144”

**Angle Top Blinds**

Minimum width:	24”
Minimum height:	24”
Maximum width:	144”
Maximum height:	120”

**Stack Options**

All vertical headrails (except Off Center Draw option) are completely reversible. Simply turn the track around and change the position of your stack and/or control. When the controls are located on the right side of the window, the rotation chain is in front while the traverse cord is in the back. The control placement is opposite when the control is on the left side of the window opening.

One-way Draw = stack and controls on the same side of the headrail. Stacks to the left or the right.

Reverse One-way Draw = controls are on the opposite side of the headrail from the stack.

Split Draw = vanes stack equally on both sides of the headrail. Controls can be on the left or the right.

Reverse Center Draw = vanes stack to the center of the headrail. Control can be on the left or the right.

Off-Center Draw = Vanes stack unequally on both sides of the headrail, distance of draw is limited to the short side.
